JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

geon, but he managed to stow away during the night. He suffered with fever and vomiting, diarrhea, chills, jaundice; died in nine days; diagnosis, enterocolitis, and intermittent fever. These patients were quarantined on board; their bedding was thrown overboard, and the usual precautions taken to prevent the spread of infection on the ship. There were several other cases of pernicious fever on the doctor's journal, which recovered. The vessel arrived here with 23 cabin, 40 steerage passengers, and 83 in the crew, all well. She was sent in quarantine with all on board for disinfection; the passengers were transferred to the Island and their effects disinfected in the usual way. The vessel was ordered alongside of the *Omaha*, from which she was disinfected throughout with sulphur fumigation and bichloride solution. This being the first time the *Omaha* was used for this purpose, it is a pleasure to be able to report that everything worked smoothly, expeditiously, and quite satisfactorily both to ourselves and to the captain and crew of the *Colon*. About 50 mattresses with a number of pillows were burned. The vessel and passengers were released at the completion of disinfection, ten days having elapsed since the last suspicious case had occurred on board.

Very respectfully,

M. J. ROSENAU,
Passed Assistant Surgeon, U. S. M. H. S.

Smallpox in Alabama.

MOBILE, ALA., May 31, 1897.

SIR: I have the honor to report that George Scales, male, colored, age 30, was sent into this city from a railroad camp, about fifteen miles from here, to the city hospital, but was not admitted, as the interne suspected smallpox. The man was sent to the city health officer, who sent him at once to the pesthouse. The man had been in the camp for three weeks, and suffered with fever for about ten days.

The excitement at Greenville, Evergreen, Fort Deposit and other points on the Louisville and Nashville Railroad, has, in a measure, subsided, but it appears that there is one case at Fort Deposit, and one at Evergreen. Brewton, Escambia County, Ala., is under suspicion, but no facts are at hand.

I am, very respectfully, your obedient servant,

R. D. MURRAY,
Surgeon, U. S. M. H. S.

Smallpox on the British ship Matterhorn.

ANGEL ISLAND, CAL., June 1, 1897.

SIR: I have the honor to report that the British ship *Matterhorn*, one hundred and ten days from Hongkong, has been held for disinfection on account of smallpox. One of the crew was taken sick with that disease eight days out of Hongkong. He recovered after an illness lasting about three weeks. No other cases occurred on board. There being no sickness upon arrival here, the vessel and all on board were given a general disinfection and then released. All were vaccinated excepting the convalescent from smallpox.

Very respectfully,

M. J. ROSENAU,
Passed Assistant Surgeon, U. S. M. H. S.
